Short communication

Encapsulation of coenzyme Q₁₀ in a simple emulsion-based nutraceutical formulation and application in cheese manufacturing

Julia Stratulat^a, Michel Britten^{b, c}, Stéphane Salmieri^a, Daniel St-Gelais^{b, c}, Claude P. Champagne^{b, c}, Patrick Fustier^b, Monique Lacroix^{a, c}

Highlights

- First report on the CoQ₁₀ encapsulation in the cheese matrix.
- CoQ₁₀ encapsulation improves the resistance of lipids against oxidation.
- CoQ₁₀ encapsulation increases significantly its retention in the cheese.
- CoQ₁₀ encapsulation does not affect the composition and cheese yield.
- This technique could be applied to level industry for functional cheese preparation.
