Enzyme Dynamics and Engineering: One Step at a Time
Chemistry & Biology, Volume 21, Issue 10, 23 October 2014, Pages 1259-1260

PDF (298 K)

Highlights

• Natural homologs conserve very limited millisecond dynamics
• A laboratory-evolved chimera tolerates dynamic variation on the catalytic timescale
• An underlying potential for flexibility may promote evolvability of function
• Conservation of native-like dynamics is not essential when engineering enzymes
